By Asa B Strong

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1848 Excerpt: . and simple; the stigma separates into three expanded segments, resembling petals, which form an arch over the stamens; the germen is long, of an obtusely triangular shape, and placed below the corolla; the capsule has three cavities, which contain numerous flat brown seeds. This plant is a native of Italy, and other parts of the south of Europe, where it is found growing wild in great abundance, flowering in June and July. It was first cultivated in England by the celebrated Gerard in the year 1596, and is now constantly propagated by the florists through the different parts of that country. It has also been found in some sections of the United States, but not in sufficient quantities to supply the demands of the druggists. In the year 1840, while travelling in the northwestern district of New-York, I found this species of the Iris quite...
