By St Bartholomew Hospital

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 edition. Excerpt: .tuberculosis. From a man aged 21, who had an attack of pleurisy one year before his death, and for seven months had suffered from symptoms of progressive phthisis and tuberculous laryngitis. Post-mortem recent tubercles were found in both lungs, in the larynx, intestines and kidneys. See Histological Records, xi. 1723a; Male Medical Register, vol. ii. (1905), No, S; Medical Post-Mortem Register, vol. xxxii. (1905), p. 24. TUBERCULOSIS IN AN INFANT. 1723b. The right lung of an infant, showing advanced tuberculous disease. The greater part of the upper lobe is occupied by a large cavity with ragged walls. Numerous miliary tubercles are present throughout the remainder of the lung. There is some opacity of the visceral pleura over the upper lobe, but no marked thickening. The bronchial glands are caseous. 9S Microscopic Examination shows extensive caseation of the lung around the cavity. From a child...

Reviews

I actually started looking over this publication. It really is rally interesting through studying period. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Dana Hintz**

Good electronic book and valuable one. It really is basic but unexpected situations in the 50 percent in the pdf. You wont really feel monotony at at any moment of your time (that's what catalogues are for concerning when you ask me).
