Brand New Book ***** Print on Demand *****.Excerpt from Original Papers on Commercial Dynamo Design Commercial Engineering. - The nineteenth century was notable for the achievements of the engineer, and there is little doubt that the men responsible for this pioneer work were engineers in the broadest sense of the word. They were engineers in their ability to manipulate the forces and materials of nature; but they were also far-sighted and level-headed men of affairs in their appreciation of the economic value of their work, and in the management of their projects. These men, by their genius and enterprise, and by their hard common sense and solid achievement, forced the world to recognize the engineer as destined to play a leading part in the future. Public attention became focussed on the engineer, and numbers of men were attracted to the profession, either through natural inclination or through hope of profit. But as was to be expected, a large percentage of these men were imperfectly educated, and possessed only a specialized talent in certain directions, without any of the broadminded comprehensive spirit of the pioneers. This change soon reacted on public opinion, and the engineer lost his high standing; so that the public and the world of commerce came to regard him as a specialized crank, a species of high-grade artisan, who though useful enough in his place, was devoid of any ability to take a sane and comprehensive view of a situation, or to manage an undertaking in which he might be interested.
