

Evaluation of Selected Solid Lubricating Films

Filesize: 6.54 MB

Reviews

The ebook is fantastic and great. I really could comprehend almost everything using this published e book. You will not really feel monotony at any moment of the time (that's what catalogues are for regarding should you check with me).

(Izabella Little)

EVALUATION OF SELECTED SOLID LUBRICATING FILMS

DOWNLOAD

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 26 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. An investigation was conducted to examine the friction and wear properties of bonded molybdenum disulfide (MoS₂), magnetron-sputtered MoS₂, ion-plated silver, ion-plated lead, magnetron-sputtered diamondlike carbon (MS DLC), and plasma-assisted, chemical-vapor-deposited DLC (PACVD DLC) films in sliding contact with 6-mm-diameter AISI 440C stainless steel balls. Unidirectional ball-on-disk sliding friction experiments were conducted with a load of 5.9 N and a sliding velocity of 0.2 ms at room temperature in three environments: ultrahigh vacuum (vacuum pressure, 7×10^{-7} Pa), humid air (relative humidity, approx. 20 percent), and dry nitrogen (relative humidity, less than 1 percent). The main criteria for judging the performance of the solid lubricating films were coefficient of friction and wear rate, which had to be less than 0.3 and on the order of 10^{-6} cubic mmN(dot)m or less, respectively. The bonded MoS₂ and magnetron-sputtered MoS₂ films met the criteria in all three environments. The ion-plated lead and silver films met the criteria only in ultrahigh vacuum but failed in humid air and in dry nitrogen. The MS DLC and PACVD DLC films met the requirements in humid air and dry nitrogen but failed in ultrahigh vacuum. This item ships from La Vergne, TN. Paperback.
